Bright red pretty small fruits. An excellent sort for preserving. Pkt. 4 cts., $\frac{1}{2}$ oz. 8 cts., oz. 15 cts.

WE ARE PRACTICAL SEED GROWERS. There is a lot of difference between a grower who knows seeds and knows what he is offering, and a Seed Speculator who buys what he can find on the market and sells it for good (tested) seed—Same difference as you see between a practical physician who knows medicine and a quack who buys some patent cure-all and sells it for the best—We are not only seed growers, but the only seed growers in this place. We are the only seedsmen who have had any experience worth naming handling seed. We have sold more seed than all others in this locality combined.

CHOICEST FLOWER SEEDS

The following list contains the very best flowers which can easily and successfully be grown from seed. Many good things are omitted either because they are too difficult to grow or are similar to what we already list. We are not only the only growers in this section, but have the largest trade in flower seeds. We have extra knowledge of and long experience with the best growers of Europe and California, and can supply a superior grade of flower seeds.

Flowers usually do best in a rich light garden soil not too wet or too dry. Some succeed fairly well if not too rich. Decomposed manure is beneficial to nearly all plants. Asters, Pansies and most bulbs, etc., like plenty of moisture (a rich soil well watered), while Portulacca and some others prefer it hot and fairly dry, and seeds will not start till weather is warm. Most plants wanted early can be started in fine soil in a sunny window in the house, great care being taken to keep moist and warm. Some hardy seeds will start well if sown early, but many will rot if earth is cold and wet. Nice mellow beds can be prepared outside for the hardier seeds when weather is warm and they can be transplanted from these when large enough.

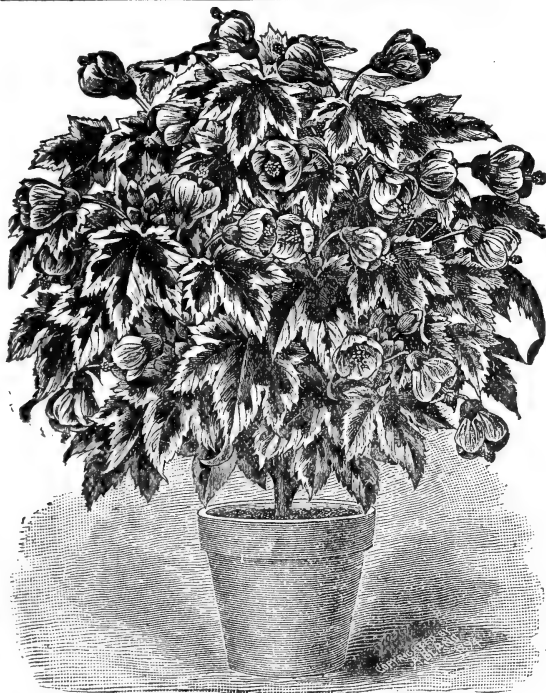

ANNUALS are plants which bloom first season from seed and then perish. Those like Balsams, Nasturtiums and Zinnias, which are easily killed by frost are called half hardy Annuals. Seeds of these should be sown, if wanted for early, in the house, but most sorts will do better if sown outside in a nicely prepared bed and transplanted to rich soil where wanted. All plants should be kept free from weeds, not crowded, and be well cultivated.

PERENNIALS are our hardy plants which live year after year; tender Perennials must be kept in house during winter. Hardy perennials are such plants as Pansies, Hollyhocks, Sweet William, Rocket, etc. Most of these will not bloom till second season. These and biennials are often benefited by a covering of hemlock boughs, straw or something which will protect from the sun and not smother plants.

BIENNIALS, produce plants first season which blossom, mature seeds and die the second season, such as Canterbury Bell, Digitalis, etc. They require about the same treatment as perennials, and like them are often benefited by a slight covering of Evergreen boughs in Winter and Spring; these should hold the snow and keep sunshine off, but not smother the plants.

GREENHOUSE SEEDS require the greatest care and should be carefully sown in a box or flowerpot in light fine earth, kept at a temperature of about 70 degrees. Always remember they need to be moist (not wet), and warm. A pane of glass over a flower pot or a wet cloth or paper will help hold moisture. When well up transplant carefully as required.

 It is only necessary in ordering Flower Seeds to write the number preceding the variety you want. We can fill the order as well from the number as when you write the entire name thus—if you ordered numbers 50 and 363 we would know you wanted Deposit Show Asters and Deposit Seed Companys Verbenas.
